SUMMARY

Product Engineer with 10+ years managing a business in Buenos Aires. I find real operational problems and build the software that solves them, end to end: Django and React web apps, React Native mobile, applied AI with the Claude API, and self-hosted services running 24/7. My systems run in production with real users and real money: a restaurant management SaaS used daily by 10 users across 2 restaurants, saving an estimated 40+ hours of manual work per month, and two trading bots I built and operate.

PROJECTS

Comanda - Restaurant Management SaaS (In Production, 2026 - Present)

Python / Django REST Framework / PostgreSQL / React / TypeScript / PWA / React Native / Expo / Claude API

- In daily production use by 10 users across 2 restaurants since mid-2026, saving an estimated 40+ hours per month of manual Excel work across purchasing, management and kitchen staff.
- Multi-tenant from day one: the second restaurant was onboarded on the same platform. Managers check the business numbers in real time from their phones.
- Recipe costs and margins recalculate automatically when supplier prices change, across 8 unit types.
- Stock counts, supplier orders via WhatsApp, daily cash and monthly cost reports, 7 role-based views.
- In development: mobile app with AI invoice reading (Claude vision + structured outputs), reviewed by the manager before anything is saved.

https://www.comanda.com.ar/

Automated Trading Bots - Hyperliquid (Live 24/7 since April 2026)

Python / asyncio / Hyperliquid SDK / systemd / Ubuntu Server / Telegram Bot API

- Built and operate two bots trading real capital 24/7 on a self-hosted Ubuntu server, with systemd auto-restart and Telegram status alerts.
- HL-Delta runs a delta-neutral funding-rate strategy with automatic coin rotation; HL-Spot trades BTC on a backtested signal with partial take-profits.
- Wrote the postmortem of a production incident (a silent order failure that led to a liquidation) and shipped the fixes: every order is now validated before the next action.

CooperaApp - Transparency for School Cooperatives (Launching 2027)

Django REST Framework / React / TypeScript / Vite / PostgreSQL / Docker / Solidity

- Born from my term as cooperative president: parents distrusted how dues and funds were handled, because that information never left the cooperative.
- Gives every family visibility into paid dues, funds raised and school news; multi-tenant with 6-role RBAC.
- Launching without blockchain, since parents don't need a DAO to trust the numbers; a DAO-per-school version with its own ERC-20 token is built on Base Sepolia (testnet) for a later scale-up.

OTHER WORK

DAO - Ethereum Hackathon, 1st place ETH KIPU Latam 2024 *(Solidity, Hardhat, Next.js)* hackatonbuildingdao.vercel.app
ERC-20 Token Swap Pool *(Solidity, React, Wagmi)* swaperc20.netlify.app
Project Management System *(Angular, NestJS, PostgreSQL, Docker)* integrador-des-app-web.vercel.app
Portfolio with AI chat assistant *(Astro, React, Claude API)* walterfrias.dev

PROFESSIONAL EXPERIENCE

General Manager | Private Business, Buenos Aires | 2016 - Present

- Lead a team of up to 10 people in daily operations.
- Own cost control, supplier management and daily cash: the operational knowledge behind the software I build.
- Resolve high-pressure situations and coordinate across teams and suppliers.

President | School Cooperative | 2025

- Managed the cooperative's dues, funds and communication with families.
- Identified the trust problem around how funds were reported, which led to building CooperaApp.

SKILLS

Applied AI:	Claude API (vision, structured outputs, streaming, prompt caching), MCP servers, AI-assisted development (Claude Code)
Product & Ops:	Product discovery, process design, team leadership, cost control, end-to-end ownership
Stack:	Python, Django, TypeScript, React, Next.js, React Native / Expo, Angular, Node.js (Express, NestJS), PostgreSQL, Docker, Linux, Ubuntu Server
Blockchain:	Solidity, Hardhat, Wagmi, ERC-20 / ERC-721
Also worked with:	Flask, MySQL, Firebase, Vite, Tailwind CSS

EDUCATION & CERTIFICATIONS

Universidad Nacional de Entre Rios (UNER)
Tecnicatura Universitaria en Desarrollo Web (Web Development degree) | 2024 - 2026

ETH KIPU Latam
Ethereum Developer Pack | 2024 - on-chain certificate

Talento Tech - Buenos Aires Ministry of Education
Node.js & React.js | 2025 - certified

Codo a Codo - Buenos Aires Ministry of Education
Full Stack Python + Django specialization | 2022-2023 - certified

ISFA Manuel Belgrano
National Teaching Degree in Visual Arts | 2018-2024

ProCp
Ontological Leadership Coaching | 2018

LANGUAGES

Spanish - Native | English - Intermediate (actively improving with formal classes)
